PROFESSIONAL SUMMARY

Lead Data Engineer with 7+ years designing and automating ETL/ELT, and turning the result into products teams actually decide with. I build end-to-end Azure and Microsoft Fabric platforms for agri-food, retail and food service: ingestion from ERP/CRM systems, APIs and databases, medallion lakehouse layers, dbt models and enterprise Power BI semantic models. Before that, insurance, banking and risk — where data quality and auditability were non-negotiable.

TECHNICAL SKILLS

Cloud & Data Platforms	Microsoft Azure · Microsoft Fabric · SQL · Medallion Lakehouse · SQL Server · PostgreSQL · Query Performance Tuning
Languages	Python · SQL · DAX · Power Query (M) · Forecasting & ML · FastAPI & Automation · Bash & Linux
Data Engineering	Microsoft Fabric · Python · dbt · Apache Airflow · ETL / ELT Pipelines · Medallion Lakehouse · Dimensional Modelling · Query Performance Tuning · Data Quality & Testing · LLM Integration · FastAPI & Automation
BI & Analytics	Power BI · DAX · Power Query (M) · Forecasting & ML · LLM Integration · Executive Dashboards · SAS Viya
Ways of Working	Git & CI/CD · Bash & Linux · Agile & Stakeholder Management · Cloud Cost Optimisation

PROFESSIONAL EXPERIENCE

Lead Data Engineer 02/2026 - Present

MOD — Makers of Digital · Barcelona, Spain

- Architect medallion lakehouse layers (bronze/silver/gold) across Azure Data Lake Storage Gen2, Azure SQL and Microsoft Fabric, sizing each database architecture to the workload rather than to a template.
- Build and maintain ETL/ELT pipelines in Python, Azure Data Factory and Airflow, ingesting from relational databases, REST APIs and ERP/CRM systems; incremental, parameterised load patterns cut both the refresh window and the compute bill.
- Model the warehouse in dbt — star schemas, SCD Type 2 and snapshot facts — with version control, automated tests and documented lineage, tuned through partitioning, indexing and pre-aggregation.
- Design enterprise Power BI semantic models, including composite Import + DirectQuery, with advanced DAX (time intelligence, variance analysis, many-to-many bridges) and governance: row-level security, incremental refresh, on-premises gateways and deployment pipelines.
- Own CI/CD with Git and define the branching methodology, repository structure and onboarding standards for the data department; productionise forecasting models (Prophet, scikit-learn) that drive demand planning and per-location purchasing recommendations.

Senior Data Engineer 01/2023 - 02/2026

NTT DATA — Europe & Latam · Barcelona, Spain

- Led requirement refinement sessions with clients, turning business needs into technical solutions and keeping stakeholders aligned on scope.
- Designed and implemented database architectures sized for scalability, performance and reliability.
- Built the data model for Effort, Delivery, Productivity and Quality analysis, giving delivery teams a shared basis for decisions.
- Designed and developed interactive Power BI reports that answer a question on the first screen rather than after three drill-downs.

SAS Consultant 01/2020 - 12/2022

PeRTICA Análisis Estadísticos S.L. · Madrid, Spain

- Owned the fraud-alert generation process for auto insurance claims end to end, from source data to the alert the investigator acts on.
- Designed, developed and maintained the ETL processes, planned jobs and workflows, and tuned queries to bring execution times down.
- Wrote Bash (Linux) and Shell (Windows) scripts for process automation, log debugging and monitoring of SAS services and resources.
- Built an automatic restart system that recovers the ETL process from incidents without manual intervention.

SAS Data Analyst 08/2019 - 01/2020

Banco Sabadell · Sabadell, Spain

- Managed the appraisal reception process for the Mortgage Guarantees Unit.
- Maintained the ETL process and handled data collection, exploitation and interpretation.
- Created dynamic reports on the key business indicators the unit was measured by.

Risk Analyst (Intern -> Junior -> Analyst)

07/2016 - 12/2018

Itaú Unibanco · São Paulo, Brazil

- Managed risk for acquirer processes at Rede (credit and debit card payments): mapped IT and business processes and measured risk impact against the control environment.
- Ran operational risk diagnosis for critical processes and key control testing, including Sarbanes-Oxley (SOX).
- Developed risk-indicator dashboards for the main business lines, analysing data with SAS, SQL and Excel.
- Owned result reporting — scope, process flow charts, assessed risks, tested controls, findings and improvements — and led the results meetings with stakeholders.

EDUCATION

B.E. in Control and Automation Engineering

2016 - 2018

Universidade Federal do ABC

Publication: Landslide Detection System: Design and Development

BSc in Science and Technology

2011 - 2016

Universidade Federal do ABC

Exchange programme — Electrical & Computer Engineering

2014 - 2015

Florida Atlantic University

CERTIFICATIONS

Data Engineer Associate — DataCamp

01/2025

Microsoft Certified: Azure Fundamentals (AZ-900) — Microsoft

06/2026

Microsoft Power BI Desktop for Business Intelligence — Udemy

05/2024

CS50's Introduction to Programming with Python — Harvard University

2023

Data Engineer — DataCamp

SQL Server Database Performance Monitoring and Tuning — Udemy

11/2021
